"My wife and I took this book with us on a recent Yankee Clipper cruise from Windjammer. The book was quite useful with good descriptions (usually a paragraph or two) of the accommodations and restaurants on the islands we visited (Grenada, Mayreau, Bequia, Carriacou, Tobago Cays). The authors were very up front about the experiences they DIDN'T like which helped us to avoid frustration. The book also had a nicely organized table of contents which helped navigate the book quickly... This is an excellent guidebook for the area and is highly recommended." -- Matthew Clark (Amazon reviewer).
A guide to St Vincent, Grenada and the Grenadines. It covers Mustique, Bequia, Palm Island, Tobago Cays, Carriacou, Mayreau, Petit St Vincent, St Vincent and Grenada, at the southern end of the Caribbean arc, just below St Lucia. St Vincent has the oldest botanical gardens in the Americas; on Bequia, some islanders still harpoon whales as their ancestors did; Grenada has pristine reefs and abundant natural beauty; and tiny Mustique, home to countless celebrities, has verdant mountains. The series of "Adventure Guides" are about living more intensely, waking up to your surroundings and truly experiencing all that you encounter. Each book offers a mix of practical travel information along with activities designed for everyone, no matter what their age or ability. Comprehensive background information - history, culture, geography and climate - presents a knowledge of each destination and its people. Regional chapters take you on an introductory tour, with stops at museums, historic sites and local attractions. The volumes also cover: places to stay and eat; transportation to, from and around your destination; practical concerns; useful websites; e-mail addresses; and tourism contacts. Detailed regional and town maps feature walking and driving tours.
"This guide is immediate and thorough; it give a host of places and activities that could fulfill even the most bored tourist's desires. The book is salted with the kind of personal experience that makes visiting these islands so special. They take us away from palm beaches, island vistas and rugged emerald mountains and put us in touch with the people who inhabit these beautiful places. From fishermen in Barrouallie to Rastas in the Port Elizabeth market and a botanist in St. George's, we get a sense of the lives that entwine to make up the

fabric of these islands. Also, each section begins with a history of the place at hand, so important to understanding the southern Windwards. The authors have produced a journeyman labor, a product of discernment and enterprise tempered with warmth and humor. Those of us who have seen the southern Windwards as a special place for so long have reason to be thankful and relieved." Paul Tyler, Caribbean Compass

The need for evidence-based practice in mental health services is becoming clearer by the day and, until recently, the trend of emphasizing services with supporting empirical evidence has been almost exclusively limited to a focus on treatment options. A Guide to Assessments That Work fills a void in the professional literature by addressing the critical role that assessment plays in providing evidence-based mental health services. To optimize its usefulness to readers, this volume addresses the assessment of the most commonly encountered disorders or conditions among children, adolescents, adults, older adults, and couples. Strategies and instruments for assessing mood disorders, anxiety disorders, couple distress and sexual problems, health-related problems, and many other

conditions are also covered in depth. With a focus throughout on assessment instruments that are feasible, psychometrically sound, and useful for typical clinical requirements, a rating system has been designed to provide evaluations of a measure's norms, reliability, validity, and clinical utility. Standardized tables summarize this information in each chapter, providing essential information on the most scientifically sound tools available for a range of assessment needs. Using the tools provided in A Guide to Assessments That Work, readers can at a glance determine the possible suitability and value of each instrument for their own clinical purposes. This much needed resource equips readers with the knowledge necessary for conducting the best evidence-based mental health assessments currently possible. There are only a few areas in human nutrition and metabolism where biomarkers are routinely used to predict health and functional outcome. For instance, of the four major nutritional deficiencies, only iron deficiency can be precisely diagnosed by employing biomarkers. They therefore play a limited role in research and decision making, and intervention strategies are still mostly targeted at the population level. What is needed at this stage are biomarkers that are predictive of later functional health and that stay stable from infancy to childhood and adult health. Moreover, individual variability must be considered, taking into account the complexity of foods, lifestyle, and metabolic processes that contribute to health or disease. These factors present significant challenges when it comes to personalizing dietary advice for healthy or diseased individuals. This book focuses on the values and limitations of traditional nutritional biomarkers and on opportunities for new biomarkers. Contributions are divided into three parts: Methodologies with regard to global epidemiology; applications/end users, and future horizons. The main goal is to review recent developments and predict how exciting new technologies could be used to drive advances in nutrition-related health care. Contains up-to-date information on the full range of international schools, including single-sex, co-educational, day and boarding schools, this guide will assist parents and children in choosing the right international school for them. Much about this third edition of A Guide to Treatments That Work remains as it was in the first and second editions. Like its predecessors, this edition offers detailed evaluative reviews of current research on empirically supported treatments, written in most instances by clinical psychologists and psychiatrists who are major contributors to that literature. Similarly, the standards by which the authors were asked to evaluate the methodological rigor of the research on treatments have also remained the same. As before, they provide information on the quality of the research on treatment efficacy and effectiveness that is reviewed. More than 30,000 listings are presented in this edition with increased coverage from major steel producing countries such as China, India, and Japan. This truly elementary book on categories introduces retracts, graphs, and adjoints to students and scientists. Incisive historical and cultural essays illuminate lost Mayan civilizations and their modern descendants while lively reviews point out the best places to eat,

drink, and stay in northern Mexico and the Yucatn Peninsula, Guatemala, Blize, Honduras, and El Salvador. 57 maps. of color photos.
